Gaussian-mixture resampling: distribution error, moments and cost

Fixed bimodal weighted cloud · N = 128 · d = 2 · rows sorted by sliced W1 · whiskers are 95% intervals over resampling seeds (conditional on the cloud)

Source: static_summary.csv. Fast methods 100 trials, OT/Gumbel 10. Forward time from the serial timing pass; includes adapter conversion, excludes JIT warm-up.

Mode kept = output mass > 1% within radius 1.35 of each mode centre (±3). Unsorted systematic implementations lose a mode in some trials; Stone Soup sorts weights first.
