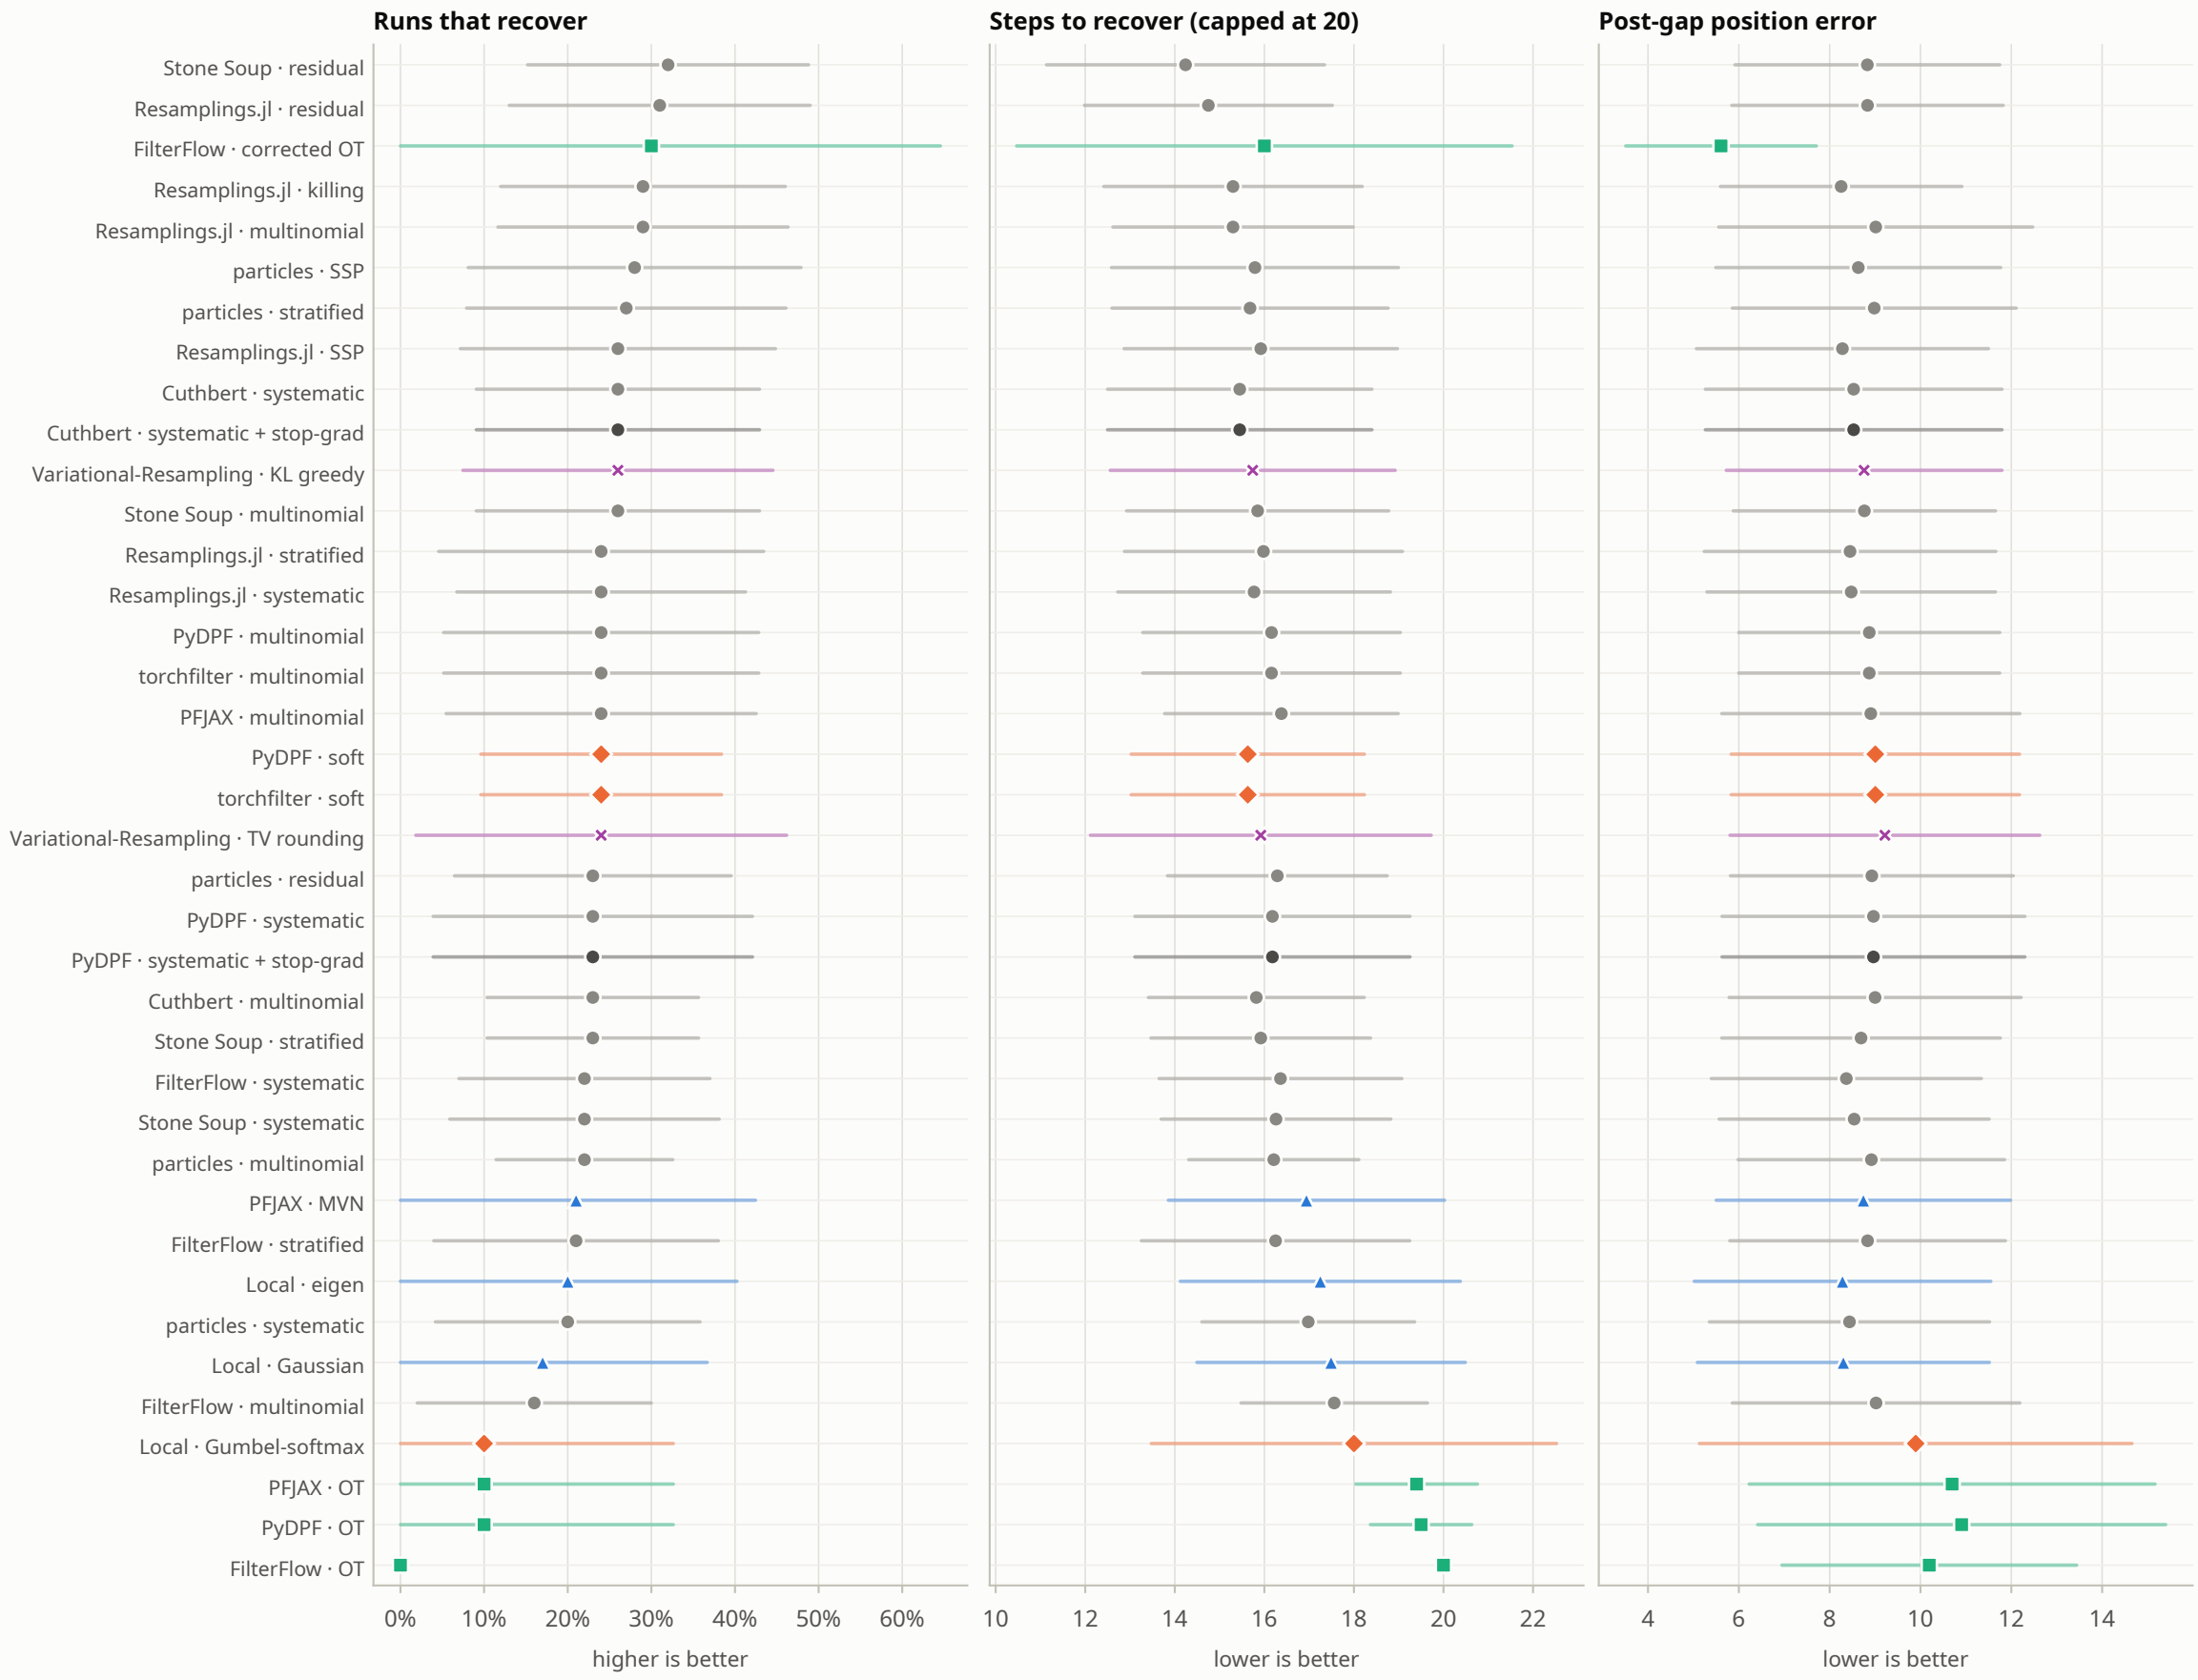
Bearing-only tracking: recovery after a ten-step observation gap

N = 128 · observations 20–29 hidden · rows sorted by recovery rate · whiskers are 95% intervals across 10 observation sequences

▲ Moment matching ■ Optimal transport × Variational / deterministic ● Classical ● Classical + stop-gradient
◆ Soft / Gumbel relaxation



Source: filter_summary.csv. Recovery = position error below 2 units for three consecutive observed steps; unrecovered runs count as 20 steps.

Post-gap error is Euclidean position error.
